REVERSE-AIR (TERTIARY PAN CLEANING FILTER SYSTEM)

They are installed in various industrial facilities, especially iron and steel, in order to purify furnace and furnace gases from the dust they contain.

Since they generally hold large amounts of dust, they have a pelletizing facility. In such systems, which have an extremely simple operating operation and multiple compartments, the gas enters the system through bunkers under the body and spreads.

The filtration process of the dusty gas occurs when it remains in the bags and comes out of the bag as clean gas.

The dust accumulated in the bags is shaken into the bunker by the reverse air flow created by the reverse flow fan as a result of the closure of the compartment flaps.

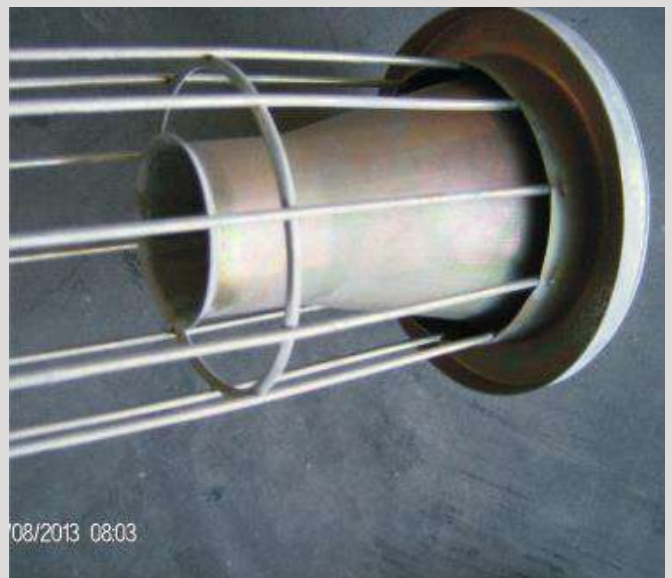

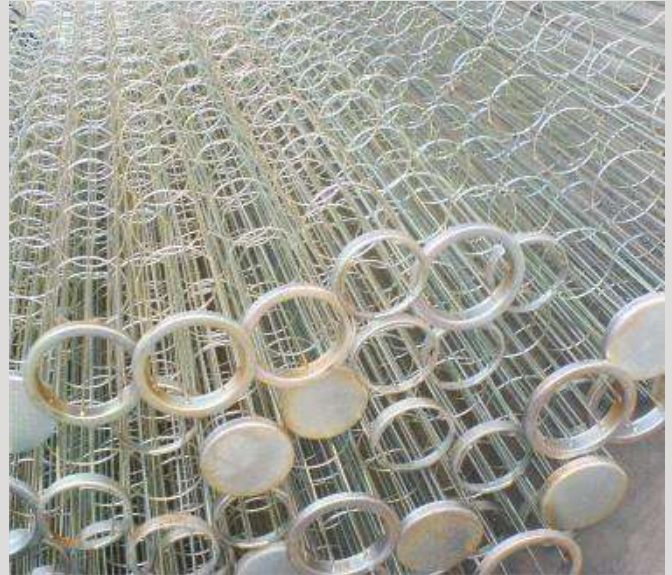

Dust collected in bunkers is transported by mechanical or pneumatic conveyors. Bags made of different materials are used depending on the type and temperature of the gas.

In this system, which is an open pressure type, the gas cleaned by passing through bags spreads freely into the atmosphere through the gaps in the roof. Each compartment in the system has a walkway and entrance door. In this type of design, which works under a certain vacuum, the cleaned gas is thrown out of the chimney through the chimney fan..

FILTER BAG WIRE CAGES

We produce Jet-Pulse, Flat and Cassette type cages in all sizes, whether single piece or double piece. All desired venturi types are available in our production. Wire cages are cleared of burrs after manufacturing, thus minimizing the possibility of any tearing/deformation while installing and removing filter bags. The electro-galvanizing process delays corrosion and extends the life of wire cages

Wasch Beton Ürünleri

Wasch Beton Ürünleri, doğal dere çakılları veya yuvarlatılmış renkli mozaik taşlarıyla üretilen bir beton türüdür. Wasch Beton Ürünleri hafif araç trafiğine açık mekanlarda, park-bahçe, yürüyüş yolları, bina girişlerinden döşeme, merdiven basamağı ve cephe kaplaması olarak yaygın bir biçimde kullanılmaktadır.

KANAL VAKUM & JET ARAÇLARI

Debris Tank:

Tank tipping device with single acting hydraulic cylinder
Tank tipping operation stop with safety tipping valve

Specifications

Tank Capacity	6000-6500LT
Material	Stainless Steel
Thickness	4mm
Paint	Desired colour with epoxy

Enkaz Tankı:

Tek etkili tank devirme cihazı
hidrolik silindir
Tank devirme işlemi ile durdur
emniyet devrilme valfi

Teknik Özellikler

Tank Kapasitesi 6000-6500 LT
Malzeme: Paslanmaz Çelik
Kalınlık 4mm
Apoxy ile istenilen rengi boyayın

WIND and SOLAR ENERGY

YENİLE BİLİNİR ENERJİ (YEŞİL ENERJİ)

Yenile bilir enerji doğal süreçlerden faydalanarak üretilen enerjidir. Enerjinin kullanımından daha hızlı ve ucuz enerjidir.

Doğayı koruyan ve sürdürülebilir olan yenilenebilir enerjinin kaynaklarının önemini her geçen gün artırmaktadır. Bazıları oldukça yüksek oranda enerji imkanı sağlarken bazıları yeterli değildir.

Başlıca yenilenebilir enerji kaynağı türleri;

- Güneş
- Rüzgar
- Hidro (hidroelektrik)
- Jeotermal enerjidir.

Firma olarak Güneş ve Rüzgar enerjisiyle ilgilenmekteyiz. Yenile bilir enerji bölümüne Em.kıdm.Mühendis Vedat AYDIN sorumluluğunda. Vedat bey iler bankasından emekli olduktan sonra bizimle çalışmaya başlamıştır. Şirketimizin yeşil enerji konusunda malzeme temini ve müteahhitlik hizmetleri verilmektedir.

RENEWABLE ENERGY (GREEN ENERGY)

Renewable energy is an energy produced by utilizing natural processes. It is faster and cheaper energy than the use of nonrenewable energy. The importance of renewable energy sources that protect nature and are sustainable is increasing day by day. While some provide a very high amount of energy, some are not sufficient. Major types of renewable energy sources

- Sun
- Wind
- Hydro (hydroelectric)
- And geothermal energy

As a company, we are specialized in Solar and Wind energy. The renewable energy department is under the responsibility of Junior Engineer Vedat AYDIN. Vedat Bey started working with us after retiring from Iler Bank. Our company provides material supply and contracting services regarding green energy.
